

SBSD Projection System Best Practices -

All of the projectors around SBSB are designed to cool down quickly, allowing for a fast restart. After powering off a projector, it can be turned back in in as little as 90 seconds.

If more than five (5) minutes will pass, when a projector won't be used, please power it off. This will save electricity, and reduce wear on the projector lamp.

Projectors on a cart should not be moved for two (2) minutes after powering off as a hot lamp is very fragile and can be destroyed if jarred.

Over-heating -

From time to time a projector will over heat, requiring the projector to be "power-cycled" (unplugged and plugged back in). This should only be performed by a member of Help Desk Staff, Library Assistant, or designee.

This can be caused by prolonged use or high temperatures in a classroom. Projectors that have dust build-up are more likely to overheat. Help Desk Staff annually cleans out projectors to reduce the possibility of overheating.

Lamp Failure -

Projector lamps are rated to last over 2000 hours. When a lamp fails the Help Desk will replace the lamp as quickly as possible during the service life of the projector.

Projector Service Life -

All SBSB projectors are purchased with a 4 year warranty that will cover every component from failure or damage with the exception of the lamp. We expect our projectors to last 5 years. The Help Desk will cover reasonable repairs after the warranty expires before the 5th year ends. Any failures after that time will not be covered by a warranty or the Help Desk and will be the responsibility of the end user or building for repair or replacement.
